Apparatus

There were no apparatus changes last year.

A definite replacement plan should be adopted in order to avoid the possibility of being faced with a larger and unexpected expenditure when the obsolete apparatus gives out.

The life of fire apparatus is questionable. Some authorities claim that 15 years is the limit. We know from experience that good apparatus, properly maintained, will last 20 to 25 years.

We have one piece with 28 years service, another 26 years, another 24 years, and three with 21 years.

To replace these will cost more than \$100,000.00

It will be necessary to replace the motors on the fire boat before very long. Maintenance costs on these are increasing every year.

Houses

The new Rosemont fire station will be completed in the Spring of 1951.

This will afford better distribution of apparatus, and will give increased protection to the fast-growing northwest section of the city.

The next building project should be modernization of the older stations. In two of these stations cooking and dining facilities are located in the basement. In all of these stations toilet facilities are the same today as they were fifty years ago when there were only two men on duty.

The outside woodwork on all of the stations needs painting badly. They were last painted 18 years ago.

The Station at Peaks Island was enlarged in order to accommodate the new tank truck.

Hose

The following amount of hose was condemned during the year:

2200	feet	of	2-1/2	inch

250	"	"	1-1/2	"

One thousand feet of 2-1/2 inch hose was purchased.

Recommendations

In view of present world conditions some recommendations should be made for building up our fire defenses. However, this is not possible owing to the existing confusion.

For what should we be prepared? What equipment can we expect from the Federal Government? How long a time will we have in order to get ready?

These questions must be answered before intelligent recommendations can be made.

Prior to the last war the city purchased some \$25,000 worth of extra equipment, including 20,000 feet of fire hose. The Government loaned us about \$35,000 worth of equipment. With this we were able to equip 19 auxiliary companies.

At the present time, with the surplus government equipment we fortunately purchased after the last war, we can partially equip 10 auxiliary companies.

At least \$50,000 will be required to build the reserves up to the 1943 strength.

Conclusion

It was most gratifying to me when we were informed last year that, effective November 1, insurance rates on private dwellings would be lower as a result of Portland becoming a Class A city. This is the best rating obtainable and is enjoyed by but few cities in the country.

This is the culmination of the efforts of the Fire Department over a period of years--the interest and support accorded the department by the City Manager and Members of the Council--the efficient enforcement of a modern building code--and the effort of the Water District officials to furnish the required supply of water.

The saving in insurance rates should more than offset the increased cost of fire department operations.

To all officials who have helped to make this possible, I express my appreciation.

To the officers and men under my command who, as their contribution have performed their duties so diligently and faithfully, and for the respect they have accorded me at all times, I give my commendation.

Respectfully submitted

Chief of Department

Fire Prevention Activities

Efficient fire prevention work, plus the spring clean-up week and the fire prevention week in the Fall, results in lower fire losses again last year.

Recommendations

In anticipation of an air raid signal system being required, similar to the one installed in the last war, immediate consideration should be given to the purchase of the necessary material.
